

ABSTRACT OF THE DISCLOSURE

A ceiling fan blade cover includes a lightweight percale cotton cloth cover having an oblong-shaped body having an edge that is sewn to prevent raveling and to create a stronger 5 foundation. An elastic band connected to the edge produces an elastic circumference of the cover. An elastic strap having two ends bar-tacked to the circumference provides removable adherence of the cover to the corresponding blade and provides for the cover to take on the shape of the corresponding ceiling fan blade when installed thereon.
